

Flooding-Rev. 7.11.14:

<http://water.weather.gov/ahps2/hydrograph.php?wfo=arx&gage=lcrm5&view=1,1,1,1,1,1,1&toggles=10,7,8,2,9,15,6&type=0>

637.8 (4.26.14 Workday) Water 3" under Bulkhead board. (3" under temporary docks. Minimum required for installing docks.) Criteria for work day: Dry grounds. In forecast: No lightning, No rain, moderate wind, temp 50. **On workday, all dock sections and supports should be tied together to bulkhead and ground and remain tied together all season so as to not damage other boats in the water.**

638 (4.29.14) Water 3" below removable docks.

638.8 (5.1.14) Water to bottom of removable docks. 21.5" below bulkhead (8" below end of town dock. Even with town dock at ramp) Driveway and parking lot about 1' above water.

639.3 Tops of most summer docks still dry.

639.5 (5.2.14) Water 3" from top of town dock. Dock sections and supports should still be tied. NOW IS THE TIME. CONSIDER REMOVING BOATS OR HAVING A BACKUP PLAN should water continue to rise. Talk with your fleet captain for suggestions. BOATS, DOCKS AND LIFTS ARE YOUR RESPONSIBILITY. IF YOU ARE "GOING AWAY" PULL YOUR BOAT OUT OR HAVE ANOTHER MEMBER TEND YOUR BOAT, DOCK AND LIFT AND *INFORM THE COMMODORE*.

640 (5.3.14) Water into parking lot near town dock. Town dock underwater. Water in the middle of gravel drive to the club. Feet get wet walking to the club. 3" over the bulkhead beam. **Water tries to float most of the removable docks.** Permanent docks are wet. Pier dry. **Fenders and extra bow lines should have been placed on floating boats. Town may close parking lot.**

641 (5.5.14) **Water just over bulkhead.** Walking into club with tall boots is just possible. All docks are underwater except main part of the pier. Water is lapping on cats. Very center of parking lot is still above water. **Town has closed the road to the parking lot.** Park on east side of Lake shore Drive. Avoid backing trailers onto home driveways. Access to boats is allowed. **Club power should be turned off.**

642 (7.2.14) Water at top of pipes on town dock. Boats parked in Nelson park overflow have water to top of tires. On beach submerged catamaran bow tips just showing. West wind wave action rocks submerged cat. Water 8" below floor of shelter. Only high spots in club are two trailer spots west of cage and between cage and fire pit and north end area around bench. Water 3" below club sign on sliding gate.

During flooding, boats on trailers can be parked in Nelson Park overflow parking area (lower elevation than our trailer area) but usually not in the paved parking area. **Permission to park in either area must be requested by club each event.**

During high water level, predictions seem to hold for about 3 days. Predictions past that frequently change. **Select "river at a glance", "All", check "Stage forecast graph", "Make my page" and look at trends. If water predictions north and south of us are rising, we can expect more water and a long recovery back to normal.**
